DTF UV Application Instructions

Applying your DTF UV transfers

Follow these steps for a clean, long-lasting DTF UV transfer. Take your time on Steps 4–6 — that's where a smooth, bubble-free finish comes from.

HOW TO APPLY YOUR TRANSFER

1. **Before removing the backing,** squeegee/scrape the print from all sides to make sure it's attached to the sheet.
   Squeegee the entire print using something firm (e.g. a credit card).
2. **Use rubbing alcohol** to clean the item where the print will be placed.
   Make sure the alcohol is dry before placing the print, and check for lint.
3. **Flip the print over face down** & carefully remove the backing of the UV print.
   Best to do this with clean hands.
4. Making sure the print is **correctly positioned & straight,** place the print on the item **from the center first.**
5. **Slowly scrape outwards** from the middle/center, pushing out air bubbles.
6. Once applied, **squeegee/scrape over the print,** making sure it's fully adhered.
7. **Carefully remove the clear film.**

That's it — your DTF UV transfer is ready. We hope you love it! ♥
